Computer Science for ALL and Cybersecurity

Building and implementing computer science education programs in high schools across the country is fundamental to prepare a diverse generation with computing and cybersecurity skills.

This new JROTC-CS program will prepare high schools with the tools and connections to build AP computer science principles and cybersecurity programs for cadets and for the entire school body.

CHS will have opportunities to meet and build relationships with tech corporations and network with the National CSforAll Community.

Computer Science Teachers are trained through College Board and JROTC instructors are trained to support students in pursuing computer science and cybersecurity career pathways.

CS Cohort will have access to cutting edge curriculum around CS Principles and cybersecurity, gain knowledge , skills and proficiencies in tech related fields, and potential opportunities to pursue future careers in computer science and/or cybersecurity.
