

RMMS STUDENT DESIGN SELECTED FOR SPACE!

All students in Grades K-8 participated in the Mission Patch Competition. The task was to capture the concept of the International Space Station ([ISS](#)) and Students Spaceflight Experiments Program ([SSEP](#)), and experiments involving microgravity.

The design above, created by Alayna McLaughlin 6th grader at Rodgers Middle Magnet School, has been selected as a winner and will be flown in space as part of the payload, along with the district's selected flight experiment.

Alayna's design will be part of a mission later this Spring or in Summer.
