

Do Not Wait Until the Last Minute!

What Your Child Needs For 2023–2024 School Entry

Before entering or attending school in-person or virtually (kindergarten through twelfth grade) each child must provide a *Florida Certification of Immunization* (DH 680 form), documenting the following vaccinations:

Public/Private Schools Kindergarten through Twelfth Grade:

- Four or five doses of diphtheria-tetanus-pertussis (DTaP) vaccine[±]
- Three doses of hepatitis B (Hep B) vaccine
- Three, four or five doses of polio (IPV) vaccine*
- Two doses of measles-mumps-rubella (MMR) vaccine
- Two doses of varicella vaccine[†]

Seventh Grade:

In addition to kindergarten through twelfth grade vaccines, students entering or attending seventh grade need the following vaccinations:

- One dose of tetanus-diphtheria-pertussis (Tdap) vaccine in grades seven through twelve
- An updated DH 680 form to include Tdap, must be obtained for submission to the school

**Need health insurance for your child?

Fl♥rida KidCare

[±] The fifth dose of DTaP vaccine is not necessary if the fourth dose was administered at age 4 years or older.

* If four or more doses are administered before age 4 years, an additional dose should be administered at age 4 through 6 years and at least six months after the previous dose. A fourth dose is not necessary if the third dose was administered at age 4 years or older and at least six months after the previous dose.

† Varicella vaccine is not required if varicella disease is documented by the health care provider.

Immunization Requirements for Entry Into Florida state schools
7th – 12th grades

The Florida Law is requiring that students entering seventh through twelfth-grades receive a very specific form of the “Tetanus” vaccine. This vaccine is referred to as the **Tdap** (Combined Tetanus, Diphtheria and Pertussis Vaccines). This requirement is in addition to the previous immunization requirements that are age-appropriate. Recommendations for provision of the Tdap vaccine are in accordance with the recommendations of the Advisory Committee on Immunization Practices (ACIP).

Documentation from the student’s health care provider should specify that the student has received the Tdap vaccine on the Florida Certificate of Immunization (680 form).

Students who cannot receive the vaccine due to medical contraindications must present a permanent medical exemption from the medical provider on the Florida Certificate of Immunization (680 form). Students that have a religious exemption must provide the DH 681 that can be obtained at the Health Department.

Three additional vaccines are not mandated, but parents are encouraged to discuss them with their child’s physician. These are: the meningococcal meningitis vaccine, Hepatitis A series, and the HPV vaccine series (now approved for both males and females).

Additional Immunization Recommendations:

Four vaccines which are not mandated for your child’s grade level, but are recommended by the Advisory Committee on Immunization Practices (ACIP) should be discussed with your health care provider are: meningococcal meningitis, hepatitis A series, Influenza and Human Papilloma (HPV) Vaccine series.

MENINGOCOCCAL DISEASE

A dose of Meningococcal (MCV4) is recommended for children and adolescents 11-18 years of age. This vaccine is 85-90% effective in preventing meningococcal disease. Meningococcal disease is a serious illness caused by bacteria. The disease is spread by airborne respiratory droplets (cough or sneezes). Symptoms of meningococcal disease are often mistaken for less serious illnesses such as the flu. Common symptoms may include: fever greater than 101.4, red to purple colored rash, nausea, vomiting, generalized muscle aches, severe headaches, confusion, sensitivity to light, and/or stiff neck. It is a leading cause of bacterial meningitis in children 2-18 years old in the United States. The vaccine is available at the department of health, Hillsborough County, if it is not provided by your child's healthcare provider's office. For those who have never gotten MCV4, a dose is recommended at high school entry but not required in the State of Florida. Most colleges and universities require this vaccine. Please check the college or university policy you plan to attend. In addition, this is highly recommended if you are living in a dormitory type of residence. MCV4 is contraindicated to anyone that experience a severe allergic reaction after a previous dose or to any components of vaccines.

Human Papilloma Virus Disease

The Human Papilloma Virus (HPV) cause the majority of genital warts, and cancers. HPV vaccine has been shown to protect against 80% of the most common types of cervical cancer and oral cancers and decrease genital warts. While it is recommended for ages 11-12 years of
